

HERZ - Balancing Valves Cast Iron

4218 GF STRÖMAX-circuit regulating valve in a flanged version is available in nominal sizes of DN 50 to DN 300. All HERZ valves are factory-equipped with test points, which can be upgraded with extended test points. The flanged upper parts of HERZ 4218 GF STRÖMAX are made of cast iron.

The pre-setting marker is fastened as a tag above the valve or pipe. The setting of the respective valve is marked by cutting or breaking off the teeth at the figures for full and partial turns. This permits checking and/or restoration of the original pre-setting made on the occasion of the system set-up after servicing without having to rely on documentation.

Presetting

1. Set the hand wheel to the desired position (Digital display on handwheel)
2. Red numbers are 1/10 of turn, blue numbers are a full turn.
3. The presetting spindle is beneath the cover. The spindle can be adjusted with an 8mm screwdriver.
To preset turn anti clockwise up to stop. The valve is now able to close and open back to the preset position. Replace the cover on the handwheel.
4. The pre-setting marker is fastened as a tag above the valve or pipe. The setting of the respective valve is marked by cutting or breaking off the teeth at the figures for full and partial turns. This permits checking and/or restoration of the original pre-setting made on the occasion of system set-up after servicing without having to rely on documentation.

The setting of flowrate is achieved with a measuring device referring to the flow charts. Please see the operating instructions from the measuring device.

Minimum operating temperature - 10 °C
Maximum operating temperature 110 °C
Maximum operating pressure 16 bar

STRÖMAX 4218 GF

Function

Two test points are fitted on the same side of the valve and factory sealed. This arrangement ensures the best accessibility in any position and optimum connection of measuring instruments.

Field of application

For hydraulic balancing in heating or cooling systems for isolating of manifolds, risers, heat exchangers, heating and cooling systems.

STRÖMAX 4218 GMF

The differential pressure is measured by an appropriate measuring device and the specific flow rate is determined. All HERZ-measuring computers directly determine the corresponding flow rate. The flow can be limited by default. The preset value remains the same even when the valve is closed. The presetting is displayed digitally on handwheel.

Function

Two test points are fitted on the same side of the valve and factory sealed. This arrangement ensures the best accessibility in any position and optimum connection of measuring instruments.

Field of application

For hydraulic balancing in heating or cooling systems for isolating of manifolds, risers, heat exchangers, heating and cooling systems.

Presetting

The valve will be delivered in opened position. The pre- setting permits the maximum possible stroke. when the valve is fully closed, the hand wheel digital display will indicate 0.0

1. Set the hand wheel to the desired position (Digital display on handwheel).
2. Remove the hand wheel securing screw, the handwheel should not be removed.
3. The presetting spindle is now accessible, screw in with a screwdriver blade width 3 x 60 until stop position is reached.
4. Replace the hand wheel securing screw.
5. To mark the adjusted position on the presetting marker and fix it on the valve.

The setting of flowrate is achieved with a measuring device referring to the flow charts. Please see the operating instructions from the measuring device.

Minimum operating temperature - 10 °C
Maximum operating temperature 110 °C
Maximum operating pressure 16 bar

Flow measuring orifice plates

Function

The orifice plate made of stainless steel PN 16 and has two measuring valves. The design of the orifice is in accordance with BS 1042, the performance curve characteristics are according to BS 7350.

Field of application

HERZ orifice plates are installed in the circuits of the hot water central heating and cooling systems, and ensure the balance of the hydraulic circuits.

The orifice plates are used either in a supply or in a return pipe.

They are either closely coupled with a balancing valve HERZ to form a complete set or used in connection with an isolation valve HERZ.

The balancing is accomplished by setting the control valve during the measurements of the pressure drop at orifice.

Benefits :

- Ease of use because of the use of only one characteristic of the orifice plate.
- Can be installed separately, e.g. as a fixed orifice.

Maximum operating temperature

110 °C

Maximum operating pressure

16 bar

HERZ butterfly valves are available in sizes of 50 to 300. The flow can be limited by default.
The default settings are indicated by the position of the lever.

Function

The butterfly valves can be used as isolating and regulating valves, which is achieved by the lever locking in the notch plate. The lever is made of fiberglass-reinforced polyamide with spring-activated locking mechanism and integrated locking hole.
 The top flange is made for the standard gears and actuating drives according to an ISO 5211.
 The rubber liner protects the body against internal corrosion. No additional seals are required.
 After final mounting the body of the butterfly valve is tested on body strength, body leakage, seat tightness and functionality according to an ISO 5208.

Field of application

Suitable for water and air systems in heating, cooling, air conditioning and ventilation.

The butterfly valves have the body types
 Type "ZF, WT" GG, JL 1040, according to EN 1561
 Type "AF, LT": GGG, JS1030, according to EN 1563.
 The body has blue color (RAL 5000),
 Inside the body is a rubber liner made of EPDM in accordance with an ISO 1691, the disc is made of carbon steel, covered with nickel and the drive shaft split into 2 parts is made of Stainless Steel 1.4408 according to EN 10088. The valves are available in Semi-lugged (type ZF, WT) or Fully-lugged (type AF, LF) versions.
